

## Healthpost History Data

A complete list of health services ever operated in western Chitwan was prepared using local and regional government records, interviews with residents, and interviews with former health services employees, including health services that had closed by the time of data collection. Health services included hospitals, clinics, dispensaries, and pharmacies. Health services histories were collected from 116 health services that had ever been operated in the valley, even if it was no longer in operation. Measures were drawn from a combination of health service records, interviews with health service owners, administrators, and interviews with staff. For older health services in which none of the current staff knew the early history of the health service, or health services that were no longer open, former administrators and staff were located and interviewed in their homes. Global positioning system equipment was also used to measure the latitude and longitude of each health service. Data were collected from 116 health services that ever existed in western Chitwan for the prior fifty years (see Axinn, Barber and Ghimire 1997 for data collection details).

## Healthpost History Data

Data Set Name: hlthist.ssd01

Unit of observation: healthpost

Number of observations: 116

Number of variables: 1,267

Unique identifier: hlthid

Response rate: 100%

Data Format: sas for unix

Sample: \*

Record length: 10,139

File structure: rectangular

Data collection: 1995 to 1996

Date: 09/08/2006
