

Merged Neighborhood History Data Times 1, 2, 3 (Neighborhood Level)

The Time 1, Time 2, and Time 3 merged neighborhood history calendar data records the history of neighborhood access to a variety of services over a period of sixty-one years. During 1995, neighborhood histories were collected from 171 CVFS sample neighborhoods for the prior fifty years (see Barber et al. 1997 for sampling details). Access to services is measured in distance in minutes to walk on foot to the nearest services. The precise timing of these events was established by reconciling the reports of several respondents with government and other independent records of events. Direct observation served as additional confirmation that the event in question had occurred (see Axinn, Barber and Ghimire 1997 for data collection details). To provide continuous measures of neighborhood characteristics, the neighborhood histories were updated in 2004, and again in 2015. The Time 2 (2004) and Time 3 (2015) data collections were performed using exactly the same methods and procedures as the first neighborhood history data collection, with some additional attention to achieving continuity between the end of the previous calendar and the beginning of the new calendar. The procedure is designed to produce a continuous record of neighborhood contextual changes through 2015.

The Time 1 data collection includes measures of neighborhood access to electricity, schools, health services, bus services, grain mills, agricultural cooperatives, dairies, markets, banks, employment opportunities, small farmers' development programs, women's groups, youth groups, temples, and police stations in each neighborhood.

The Time 2 data collection includes the Time 1 measures, plus a small number of new organizations that came to the setting since 1995. These new measures include access to agrovet services, movie theaters, video shops, cable, telephone services, internet and e-mail, postal and exdel services, computer training, language training, saw mills, poultry farms, concrete block factories, bike maintenance services, motor bike and motor maintenance services, and proximity of tourist hotels. Also, measures of access to temples were expanded to measure community access specifically to temples, monasteries, mosques, and churches. Global positioning system equipment was also used to measure the latitude and longitude of each neighborhood.

The Time 3 data collection includes measures from Times 1 and 2, plus a small number of new organizations, including mobile shops, ambulance services, manpower companies, money transfer services, educational consultancy services, hatcheries, factories, savings and credit groups, and clubs.

Independent Time 1, Time 2, and Time 3 neighborhood history calendar datasets were merged to create the merged neighborhood history calendar dataset. For all three waves of data collection, all measures were collected at the neighborhood level. The three waves of data collection were merged with a simple 1:1 merge by neighborhood id (**nbhid**). The neighborhood IDs are consistent across all waves of data collection, and the neighborhoods themselves do not change (with the exception of neighborhood 089 which was swept away by a flood in 2002). Endpoints of adjacent waves of data collection overlap, causing data to be collected on the common years twice. In this file, data for these overlapping years is retained from the last year of the earlier data collection wave, which will in most cases be the same year as the data collection itself, and thus is considered to be more accurate. In other words, data for year 60 is collected as the last year of the Time 2 neighborhood history calendar, and collected again as the earliest year of the Time 3 neighborhood history calendar. The data collected for year 60 during the Time 2 data collection is retained. For example, Time 2 data collection measured access to electricity from Nepalese years 2053-2060 and Time 3 data collection measured access to electricity from Nepalese years 2060-2071. Thus, both Time 2 and Time 3 measure access to electricity in 2060. This file retains the T2 measure of access to electricity.

Merged Neighborhood History Data Times 1, 2, 3 (Neighborhood Level)

Merged Neighborhood History Data Times 1, 2, 3 (Neighborhood Level)

Data Description:

The following measures were collected during the Time 1 data collection, but dropped in Time 2 and Time 3 data collections. The time-varying measures range from Nepalese years 2010-2052:

Time-varying measures: Minutes on bus to nearest school (**schlbs**), bus fare to nearest school (**scbsc**), minutest on bus to nearest health facility (**hlthbs**), bus fare to nearest health facility (**hlbsc**), minutes on bus to nearest place of employment (**empbs**), bus fare to nearest place of employment (**embse**), number of employees at nearest place of employment (**emii**), and type of women's group (**grpwtp**).

Non time-varying measures: Year that nearest police station was built (**polyr**) and year that nearest temple was built (**tempyr**).

The following measures were dropped from the Time 1 data collection and replaced with slightly different measures in the Time 2 and Time 3 data collections:

The Time 1 measure of distance on foot to nearest movie hall in 2053 (**filmft**) was replaced with the time-varying measures of distance on foot to nearest movie hall (**filmft53-filmft71**). The Time 1 measures of distance on bike to nearest movie hall in 2053 (**filmbk**) and movie hall location in 2053 (**filmloc**) were removed and replaced with the Time 2 and Time 3 time-varying identification variables of nearest movie hall (**filmid53-filmid71**).

The Time 1 measures of distance by bus to Narayanghat (**bsiidn10-bsiidn52**), minutes on foot to bus to Narayanghat (**bsiift10-bsiift52**), and year that regular bus service to Narayanghat became available (**bsiirs10-bsiirs52**) were changed to the Time 2 and Time 3 measures of bus fare to Narayanghat (**busfee53-71**) and distance by bus to Narayanghat (**busnar53-71**).

The Time 1 collective measures of type of temple (**temptp10-temptp52**) and distance to nearest religious structure (**tempft10-tempft52**) were removed in Time 2 and replaced with separate measures of churches (**churft53-churft71** and **churid53-churid71**), monasteries (**mnstft53-mnstft71** and **mnstid53-mnstid71**), mosques (**mosqft53-mosqft71** and **mosqid53-mosqid71**), and temples (**tempft10-tempft71** and **tempid53-tempid71**).

The following measures were added to the Time 2 data collection. These time-varying measures range from Nepalese years 2053-2071:

Access to video shops (**vidft** and **vidid**), cable (**cabl**) agrovot services (**agroft** and **agrold**), tourist hotels (**hotft** and **hotld**), telephone services (**tele** and **teleft**), internet and email (**inetft** and **inetid**), postal and excel services (**postft** and **postid**), computer training (**compft** and **compid**), language training (**langft** and **langid**), saw mills (**sawmft** and **sawmid**), poultry farms (**pltrft** and **pltrid**), concrete block factories (**cnrtft** and **cnrtid**), bike maintenance services (**bkmnft** and **bkmnid**), and motorbike/motor maintenance services (**mtrmft** and **mtrmid**).

Identification variables for mills (**millid**), co-operatives (**coopid**), dairies (**daryid**), markets (**marid**), places of employment (**empid**), and police stations (**polid**).

The following time-varying measures were added to the Time 3 data collection. These time-varying variables range from Nepalese years 2060-2071:

Access to mobile shops (**mobshft** and **mobshopid**), ambulance services (**ambultft** and **ambulid**), man power companies and man power agents (**manpowrft**, **manpowrid**, and **mpagent**), money transfer services (**mtrnfrft** and **mtrnfrid**), educational consultancy services (**educonsolft** and **educonsolid**), hatcheries (**hatchft** and **hatchid**), factories (**factryft** and **factryid**), and number of savings and credit groups (**s_cgrp**) and clubs (**club**).

Data for measures of ethnic oversample (**ethosamp**), strata 2 and 3 oversample (**st2osamp** and **st3osamp**), and systematic sample (**syssamp**) remained consistent for Times 1, 2, and 3.
